

Summer Intern

I am actively seeking a summer intern to work in our agronomy department for 2008. We have just become very involved in the vegetable side of the agronomy business so one of the main duties of the intern would be weekly tissue sampling and return of results to our vegetable producers.

In addition to these duties, we would ask them to field scout soybean, corn and alfalfa fields for weeds and insects. Soil sampling, results analysis and return to client would also be part of their duties.

We would also expose them to the custome application portion of our business and finally give them some experience in business management of an agri-business.

I am in hopes that you could circulate this information for me.

For questions or additional information, please contact me at the address listed below.
